Before you can implement an effective security and privacy program in your company, you need a solid strategy. With the HP Security Strategy and Privacy Workshop, you’ll get help formulating a plan that works because it’s firmly grounded in your specific business requirements.

A security strategy is the foundation upon which a security program is built. For that reason it is vital that it be done correctly. But the formulation of security strategy is not something that most people do very frequently and so it makes sense to hire a consultant who has expertise in this area. Formulating the right security strategy can have a tremendous payback in terms of efficient use of security resources and funds as well as in the ultimate effectiveness of the security program.

Defining a strategy for addressing security and privacy issues is the very first step in the process of establishing sound governance in these areas. It’s not enough to rely on best practice or published standards. In order to be effective, security and privacy strategy must be based on the unique needs of each organization.

Even if you have security and privacy programs in place today, the HP Security Strategy and Privacy Workshop could make them more effective and lead to much higher levels of compliance than you are currently experiencing.
Set the stage for security policies that work

The HP Security Strategy and Privacy Workshop focuses on existing policies and key business requirements so you can develop a solid foundation of security policies that can be used both now and in the future. HP consultants will help you:

- Make important decisions on how to address the important topics of security and privacy
- Get expert guidance on security and strategy policies with trained and experienced HP consultants
- Educate key personnel about the business impacts of today’s critical security and privacy issues
- Get a road map for the future with a strategy report that can be used for planning projects and building a case for resource allocation
- Define the business benefit of a security and privacy program
- Increase efficient use of resources with a simplified decision-making process
- Choose and prioritize projects with expert guidance
- Learn when to accept risks and when to take action with clear definitions of security parameters

How it works

As part of the HP Security Strategy and Privacy Workshop, HP consultants will:

- Work with you to identify the key stakeholders who should be included in the workshop
- Conduct a one-day workshop covering the following topics:
  - Significant information risks that organizations like yours face
  - Determination of business drivers and requirements related to security and privacy
  - Relevant legal and regulatory requirements and issues (This is general information only, not legal advice.)
  - Case studies of significantly different approaches to security and privacy

- An exercise to bring consensus about the basic principles of security and privacy that should guide decision-making at your organization
- An exercise to bring consensus on an approach to security and privacy requirements
- Discussion on and prioritization of next steps and projects that might be needed
- Write and deliver a report summarizing the results of the workshop written in the form of a high-level security and/or privacy strategy. This report will summarize the following topics:
  - Business requirements
  - Risk exposures compared to those typical for similar organizations
  - Guiding principles governing security and privacy
  - The approach used to address security and privacy
  - Next steps, including an overview of any recommended projects

Service options

HP offers a full breadth of end-to-end solutions that go beyond the scope of this packaged service. Custom services are available to meet the specific requirements of your security needs. Options include:

- A two-day workshop, covering security one day and privacy the next
- More support in the development of a security strategy (see our Security Governance Strategy Development Service, which includes an extensive business analysis and risk assessment)

Please contact your local HP sales representative for more details.
